## **AK Series**

## **Low Energy Brackish Water RO Elements**

The A-Series, family of proprietary thin-film reverse osmosis membrane elements are characterized by high flux and high sodium chloride rejection. AK Low Pressure Brackish Water Elements are selected when high rejection and low operating pressures are desired. These elements allow significant energy savings since good rejection is achieved at operat-ing pressures as low as 100 psi (689 kPa).

<sup>&</sup>lt;sup>3</sup> These elements are bagged dried, unless specified WET, before shipping.

<sup>3</sup> The element diameter (dimension C) is designed for optimum performance in GE pressure vessels. Others pressure vessel dimension and tolerance may result in excessive bypass and loss of capacity.
